

SCREEN Semiconductor Solutions and DHL Express aim to reduce CO₂e Greenhouse Gas emissions by using sustainable aviation fuel

Both parties have signed a long-term agreement for GoGreen Plus service to reduce emissions through the use of sustainable aviation fuel (SAF)

Customer Challenge

- Actively working to combat climate change in their supply chain with the goal of reducing 100% of greenhouse gas emissions related to express shipments
- Nearly 80% of their total sales are tied to clients overseas for small parts and maintenance parts

DHL Solution

- Leverage the international shipping service that reduces ('inset') the carbon emissions through the use of sustainable aviation fuel (SAF)
- Manifest in a long-term agreement for GoGreen Plus
- No operational change of processes required

Benefits and Impact

- SCREEN Semiconductor Solutions was able to replace 100% fossil kerosene associated with their use of international express shipments with Sustainable Aviation Fuel
- The associated CO₂e GHG emissions were reduced by >85%
