

YOUR GLOBAL NETWORK OF EV EXPERTS

INTERNATIONAL EV LOGISTICS REGULATIONS VARY WIDELY AND ARE CONSTANTLY CHANGING. WE SIFT THROUGH THE COMPLEXITY AND KEEP YOU COMPLIANT.

WATCH THE VIDEO

Transporting EV batteries – especially damaged units – is a real challenge. EV batteries are classified as dangerous goods (DG) and subject to international and domestic regulations. Many safety measures are required for compliant transport, which can vary depending on the continent, country, region, and means of transportation.

With our worldwide network of specialist auto-mobility teams, you get access to local expertise no matter the destination. Our EV experts have been specially trained and certified in moving hazardous goods and EV batteries. Based around the world, they can help you understand all the requirements and have the right local contacts to answer any compliance question.

Our teams can also help you design standardized DG compliance processes to optimize efficiency and leverage our strong airline carrier partnerships to give you maximum flexibility.

With our global network, you'll have full regulatory compliance, efficient processes, and service excellence – all of which will ensure your shipments clear customers faster and reach their destinations on time.
