

Sustainable Logistics. Simplified

CHECKLIST TO ENSURE HIGH QUALITY LOW-EMISSION TRANSPORT SERVICE

- Low – emission transport service, not a trade of certificates
- Based on real reductions within same mode of transport
- No overcompensation (e.g., of residual emissions that occurred during sustainable fuel production)
- Additional to any volumes required through regulatory schemes
- Vintage requirements checked (i.e., booked within 12 months, reported within 24 months)
- Known reporting logic with external verification to avoid double counting
- Known audit cycle in line with own needs for verified documents
