

INBOUND TRANSPORT OPERATIONS

Reduce freight costs by consolidating collections

Imagine a solution that can address your unique transport challenges in a standardized manner. By coordinating and consolidating your material collections you get the right goods at the right time, flowing through your supply chain with reduced freight costs and environmental impact.

A TRUSTED PARTNER

Leverage our planning and execution capabilities including improved materials collection from suppliers and synchronized delivery to manufacturing sites or warehouses.

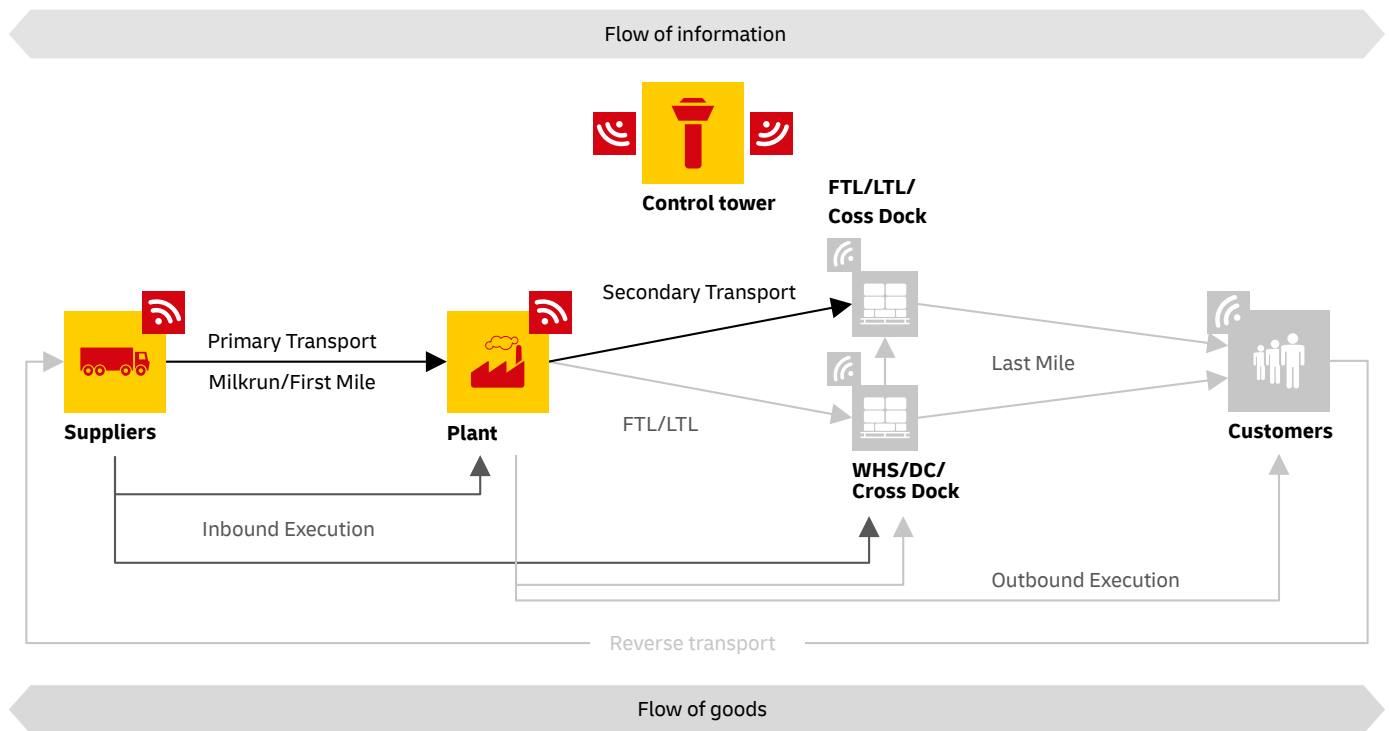

Optimize inventory costs and on-site space

Our capacity planning and data analysis gives you the greatest product availability with the lowest inventory, freeing up on-site space and reducing your overall cost of inventory as you only carry what you need.

DHL INBOUND TRANSPORT OPERATIONS SOLUTION CAPABILITIES

- Network planning
- Freight optimization
- Dedicated services or shared networks
- Inbound synchronization
- Consolidation and milk-runs
- Yard management
- Real-time visibility
- Invoicing
- Performance Management
- Data management and analytics
- Process improvement
- Service level optimization
- Safety first culture

OPTIMIZE YOUR INBOUND DOMESTIC TRANSPORT

Seamless material flow with improved supplier traffic

With us coordinating your material collection services you receive a constant sourcing of materials from supplier distribution centers to manufacturing production lines. This means you receive every material, part or component exactly where it needs to be when it needs to be there, with fewer suppliers accessing your facility.

Improve control and visibility

All of our scheduled deliveries include real-time track and trace so you can maintain end-to-end visibility of your inbound supply chain and centralize transport control.

Increases the efficiency of your transport network

We work with you to design a solution that focuses on supply chain and transportation optimization providing you with the right number of vehicles, journeys and optimized routes. This improves the efficiency of your transport network, reduces the number of vehicles on the road and in turn your overall transport costs and environmental impact.

Improve materials collection from suppliers and synchronize deliveries to your manufacturing sites or warehouses.

Get the right goods at the right and shortest time possible flowing seamlessly through your distribution network to stores and end customers.
